SUMMARY

Marimuthu has 20+ years of experience in software product development across Aerospace, BFSI, Hi-tech and Media & Entertainment industries, with good exposure in Agile methodologies. Currently he is working for MBB Labs as a Lead Product Engineer, developing an AI enabled financial analytics platform and its components using Java, Java EE, Apache Kafka, React, Oracle, and Azure.

He owns the architecture end to end, from service boundaries and API contracts to delivery, while staying hands-on with code. He enjoys building distributed, event driven systems and mentoring engineers to deliver quality products.

EDUCATION

Master of Computer Applications	Bharathidasan University, Tiruchirappalli	2001
Bachelor of Science	Bharathidasan University, Tiruchirappalli	1997

TECHNICAL EXPOSURE

Language	C, C++, Java , PowerShell, Python, Node.js, Go
Database	Oracle , MS SQL, PostgreSQL
Messaging	Apache Kafka, JMS
Frontend	JavaScript , ExtJS, React , Vue
Mobile	Android, Kotlin, Flutter
DevOps	Git , GitHub Actions, SonarQube, Jenkins, Docker
Architecture	Functions, Serverless, Microservices , SOA

PROFESSIONAL EXPERIENCE: 20+ YEARS

MBB Labs Private Limited	Lead Product Engineer	Since Dec 2021
Capgemini India Private Limited	Technical Architect	Jul 2016 to Dec 2021
Tata Consultancy Services	Assistant Consultant	Feb 2011 to Jul 2016
Oracle Financial Services Software Limited	Consultant	Sep 2007 to Feb 2011
NDS Limited	Software Engineer	Apr 2005 to Sep 2007

PROJECT DETAILS

1. Project Name: Financial Analytics - Platform Components

Organization: MBB Labs, Bengaluru

Client: Own Product

Platform: Java, Spring Boot, JPA, Apache Kafka, Oracle, React, Docker, Azure

Period: Since December 2021

Role: Lead Product Engineer

Description:

An AI enabled financial analytics platform providing reusable components and frameworks used across 20+ banking products. The platform covers a portfolio eco-system, reporting framework, questionnaire and template designer, and Unified Access Management (UAM) for secure access across multiple products.

As part of the core platform team, architected the microservices, defining service boundaries, event flows, and API contracts. Designed real time, event driven data processing with Apache Kafka and implemented distributed data management with JPA and Oracle. Built the React front end integrated via REST APIs and containerized the services with Docker on Azure. Owns the architecture, code and design reviews, enabling reuse across 20+ applications and improving development speed and consistency.

2. Project Name: CPAO

Organization: Capgemini, Bangalore | Toulouse

Client: Airbus

Platform: Java, Java EE, Spring, JPA, Angular, Vue.js, VuePress, Oracle

Period: July 2016 to December 2021

Role: Technical Architect

Description:

Next generation Change Process Offering application: a workflow management portal for both the client and their suppliers, supporting aircraft configuration management, engineering change control, and offer lifecycle processes. Delivered within a distributed Scaled Agile framework.

Worked with the product owner, business owner and colleagues as a full stack developer. Designed application components supporting complex PLM workflows and built REST APIs enabling integration across distributed enterprise systems. Used modern DevOps tools like Git, Jenkins, SonarQube and Artifactory. Developed the product documentation and admin console using Vue and VuePress.

3. Project Name: Digital Transformation Offers

Organization: TCS, Bangalore | Scotland

Client: Confidential

Platform: Java, Python, Sencha ExtJS, JMS, Stanford CoreNLP, AWS, MS SQL Server

Period: February 2011 to July 2016

Role: Technical Lead

Description:

A portfolio of digital transformation solutions for the client's enterprise Service Desk operations. The Agent Management System is a forecasting, scheduling and allocation engine used across the enterprise. The portfolio also includes a virtual assistant that addresses customer queries through the web interface and a Virtual Kiosk that investigates and resolves system issues in an artificially intelligent way.

As Technical Lead, developed the Agent Management System using Java technologies, automating workforce planning and significantly reducing manual effort. Built the virtual assistant using NLP algorithms with Ext JS and the Stanford NLP library on WebSphere. Designed the Virtual Kiosk as a thick client application deployed on end user computers. Responsible for design, development and delivery across these initiatives.

4. Project Name: OFSAA Transfer Pricing

Organization: Oracle, Bangalore

Client: Own Product

Platform: OFSAA Infrastructure, Java, J2EE, XML, Ajax, Struts, Oracle, SQL, PL/SQL

Period: September 2007 to February 2011

Role: Technical Lead

Description:

Oracle FSGBU product suite covering Oracle Financial Services Advanced Analytical Applications Infrastructure, Oracle Funds Transfer Pricing, Oracle Advanced Asset Liability Management, and Oracle Profitability Manager. OFSAA Funds Transfer Pricing enables financial institutions to measure and meet risk adjusted performance objectives, cultivate a risk management culture through transparency, and lower the costs of compliance and regulation, using both deterministic and stochastic methods.

As part of the product and solution engineering team, developed the REST APIs, UI, and API for CommonApps. Contributed across user interface design, development, unit testing, integration, delivery and support, using Reveleus Java libraries, Java, Ajax, JavaScript, Struts 2.0, ICC Batch, and the interface to the Cash Flow Engine. Responsible for the sprint delivery following Agile practice.

5. Project Name: **JEPG (Java Electronic Program Guide)**

Organization: NDS, Bengaluru | Jerusalem

Client: DirecTV

Platform: Core Java, Swing

Period: April 2005 to September 2007

Role: Software Engineer

Description:

JEPG is an EPG framework for Set Top Boxes supporting both single and twin tuners. The EPG is a graphical UI/UX widget set for APG data through which the user can view the TV program schedule, set reminders, and more. The box is DVR, PVR, and PPV enabled, and the product is a Conditional Access System for TV Platforms.

Implemented and optimized the EPG screens, rendering and event processing logic, improving screen rendering performance. Built an in-container test harness framework (Droid) used by distributed teams.

COMMUNITY CONTRIBUTION

Sencha Ext JS MVP Recognized for community contributions (Since 2019), Sencha Inc

Mentor Mentoring underprivileged students at Agaram Foundation, Tamil Nadu

DECLARATION

Place: Bengaluru

Date: July 2026

Regards,

Marimuthu Periyannan
